DETAILED ACTION

1. In response to the Office action mailed on February 26, 2008 the Amendment has been received on May 23, 2008.

Claim 10 has been amended.

Claims 1-20 are currently pending in this application.

Allowable Subject Matter

2. Claims 1-20 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because prior art fails to teach or make obvious a computed tomography apparatus comprising: a detector arrangement that detects radiation that traverses the examination zone, wherein the detector arrangement is configured for displacement, with respect to the radiation source, in a direction along the longitudinal axis; a first drive unit configured to displace the detector arrangement along the longitudinal axis so that substantially, all transmission radiation that traverses the examination zone bypasses the detector arrangement and scattered radiation that traverses the examination zone illuminates the detector arrangement as claimed in combination with all of the remaining limitations of the claim.

Claim 10 is allowed because prior art fails to teach or make obvious a computed tomography apparatus comprising: a collimator arranged between the examination zone

and the detector arrangement, wherein the collimator includes a sub-region that attenuates the transmission radiation so that an intensity of a transmission radiation traversing the sub-region and illuminating the detector arrangement is substantially equal to an intensity of a scattered radiation illuminating the detector arrangement, and wherein the sub-region includes an opening through which transmission radiation traverses substantially unattenuated and illuminates the detector arrangement as claimed in combination with all of the remaining limitations of the claim.

Claim 11 is allowed because prior art fails to teach or make obvious a method, comprising: selectively directing a radiation beam with respect to a detector arrangement so that transmission radiation, corresponding to the radiation beam, that traverses an examination zone and bypasses the detector arrangement; and detecting scattered radiation corresponding to the radiation beam, that traverses the examination zone and illuminates the detector arrangement as claimed in combination with all of the remaining limitations of the claim.

Claims 2-9 and 12-20 are allowed in virtue of their dependence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments, see pages 7 and 8, filed May 23, 2008, with respect to claims 1-20 have been fully considered and are persuasive. The rejection of claims 10 and 18-20 has been withdrawn.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lazarev et al. (US Patent 6,483,891 A1), Scheild et al. (US Patent 5,164,976) and Kravis (US Patent Application Publication 2006/0140340 A1) teach the X-ray computed tomography apparatus providing scatter mapping, compensating and analysis.
